¹ Divers : PET, alu, fer-blanc, textiles, piles et huiles.² Communes abritant un ESREC sur leur territoire.**Explications : indicateurs de performance en matière de recyclage des déchets urbains communaux**

Le fruit des efforts des collectivités publiques et de la population genevoise en matière de tri des déchets se mesure à l'aide de deux indicateurs :

- **Production de déchets urbains communaux incinérés en kg par habitant** : c'est l'indicateur le plus pertinent pour effectuer des comparaisons entre communes, car il n'est pas influencé par la typologie de la commune, contrairement au taux de recyclage.
- **Taux de recyclage** : cet indicateur est surtout utile pour suivre les progrès réalisés au niveau cantonal. Par contre, il ne doit pas être utilisé pour effectuer un classement des communes. En effet, la quantité de déchets de jardin produite par habitant peut avoir une forte influence sur le taux de recyclage. Or cette quantité dépend fortement de la typologie de la commune (centre, commune suburbaine ou commune rurale).
